## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

1. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hinshaw et al(6,039,820).

Hinshaw et al discloses a gas generating composition that is used in an air bag device and is formed into pellets that comprises an organic fuel with 0-40 % of a secondary fuel such as guanidine nitrate (col. 10, lines 25-60), an oxidizer such as basic copper nitrate or alkali metal nitrates where the sum of the co-oxidizer and the nitrogen fuel is from 10-60 % of the composition (col. 11, lines 25-35). The composition can include other additives such as burn rate modifiers including metal oxides and coolants such as aluminum hydroxide (col. 9, lines 10-18). Binders such as celluoses or polyacrylamide can be added from .5-12 % (col. 7, lines 32-50). There is not an example of the exact mixture claimed or the precise amounts of the additives.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to vary the amounts and the specific ingredients that are disclosed by Hinshaw et al to achieve a desired result. It is well-settled that optimizing a result effective variable is well within the expected ability of a person of ordinary skill in the subject art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980), In re Aller, 220 F.2d 454, 105 USPQ 233 (CCPA 1955).

2. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamato (6,517,647).

Yamato discloses a gas generating composition that is used in an air bag device and is formed into pellets that comprises a guanidine fuel from 10-60 %(col. 3, lines 40-52), oxidizers such as basic copper nitrate or alkali nitrates from 40-90 % (col. 4, lines 20-45), binders such as carboxymethylcellulose from .1-15 % (col. 4, lines 45-65), and additives such as aluminum hydroxide and carbonates from .1-15 % (col. 4, lines 65-67, col. 5, lines 1-15). There is not an example of the exact mixture claimed or the precise amounts of the additives.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to vary the amounts and the specific ingredients that are disclosed by Yamato to achieve a desired result. It is well-settled that optimizing a result effective variable is well within the expected ability of a person of ordinary skill in the subject art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980), In re Aller, 220 F.2d 454, 105 USPQ 233 (CCPA 1955).

## Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Aileen Felton whose telephone number is (703) 306-5751. The examiner can normally be reached on Monday through Friday from 6:30 am to 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael Carone, can be reached on (703) 306-4198.

The fax phone number for the organization where this application or proceeding is assigned is (703) 305-7687. The fax number for submissions before a final action is

Application/Control Number: 10/659,267

Art Unit: 3641

Page 4

(703) 872-9326, for after final submissions is (703) 872-9327, and customer service is (703) 872-9325.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1113.
